VIKRAM EJJAGIRI

Industrial AI · Machine Learning · Digital Production

Cham, Bavaria, Germany · vikramejjagiri08@gmail.com · linkedin.com/in/vikramejjagiri · github.com/vikram-ejjagiri-ai · Portfolio

PROFILE

Master's student in Applied AI for Digital Production Management (M.Eng.) at TH Deggendorf with a Bachelor's in Mechanical Engineering (Honors in Robotics). I build industrial AI end to end: from machine data collection (OPC UA, MQTT) to predictive maintenance, visual quality inspection and LLM assistants for documents and data. **Available immediately** for a working student position, an internship, a Master's thesis or a full-time role.

EDUCATION

03/2025 – present

M.Eng. Applied AI for Digital Production Management

Technische Hochschule Deggendorf, Germany
Current grade: 2.3 (German scale, 1.0 = best) · 90 ECTS, taught in English
Modules: Machine Learning & Deep Learning in Production and Logistics · Advanced Statistical Methods & Optimization (SPC, design of experiments) · Production Data Management, ERP & MES · Big Data, MLOps & NLP · Cyber-Physical Production Systems & Simulation (AnyLogic) · Production and Logistics Management (Lean, Six Sigma) · Quality & Sustainability (FMEA, process capability) · AI and production-systems case studies

08/2021 – 05/2024

B.Eng. Mechanical Engineering (Honors in Robotics)

Vasavi College of Engineering, Hyderabad, India
CGPA 8.17/10 · Bachelor's thesis: Modified SCARA robot · Honors thesis: Design and analysis of an ornithopter

2018 – 2021

Diploma in Mechanical Engineering

Government Polytechnic, Warangal, India
CGPA 9.52/10

PROJECTS

Kaizen Matrix: my own industrial AI project series (2026), each with code, tests and documentation on GitHub. Prototypes on simulated or public data, not yet validated on a real line

Production Digitalization Platform: Sensor to Dashboard

MQTT · TimescaleDB · Docker · scikit-learn · SimPy

github.com/vikram-ejjagiri-ai/production-digitalization-platform

- End-to-end shopfloor platform with one-click start (Docker Compose): real compressor data (MetroPT-3) and a simulated assembly line with RFID (SimPy) over MQTT into TimescaleDB, with harmonization of messy station data and RFID de-duplication.
- KPI engine for OEE, FPY, MTBF/MTTR and RFID lead time; health model (Isolation Forest + SPC z-score) trained on the commissioning period: in the end-to-end run the alarm opened about 2.5 h before the first reported failure.
- AI advisor with retrieval over FMEA/SOPs and a local LLM (rule-based fallback); three Grafana dashboards as code, SQL views for Power BI; 20 unit tests.

Kaizen Assist: GenAI Knowledge Assistant for Engineering

RAG · Text-to-SQL · DuckDB · Ollama · Streamlit

github.com/vikram-ejjagiri-ai/kaizen-assist

- Hybrid retrieval (BM25 + embeddings, RRF) over specifications, test procedures and PDF test reports with version awareness; cited answers from a local LLM (Ollama) or an API.
- Guarded Text-to-SQL on DuckDB (semantic layer, sqlglot guard, read-only) and a compare tool that checks measured values against the released specification limit.
- Guardrails against prompt injection, safety bypass and guessing; evaluation: 96.9 % on 64 development questions, 75 % on a second domain without tuning; 25 unit tests.

Kaizen Optimize: Production Optimization on Real Data Bayesian opt. · OR-Tools · SciPy · Streamlit

github.com/vikram-ejjagiri-ai/kaizen-optimize

- Four plant decisions on real public data: cutting data from a model calibrated on C45 lathe tests (Bayesian optimization vs DOE, −40 % machining cost) and job sequencing on a published benchmark (2.6 % from best known).
- Censored Weibull fit on 23,550 SCANIA trucks (best replacement age, −24 % cost vs run to failure) and (s, Q) spare-part policies tested on 12 unseen months; Streamlit dashboard, number-checked LLM advisor, 18 tests.

KnowFlow AI: Personal AI Assistant for Documents and Spreadsheets FastAPI · Next.js · TypeScript · RAG · OCR

github.com/vikram-ejjagiri-ai/personal-ai-assistant

- Full-stack workspace (FastAPI, Next.js/TypeScript): chat with PDFs, scans (OCR), Word, PowerPoint and Excel files; answers cite page or cell, spreadsheet questions run as validated pandas queries with charts.
- Safe AI edits (preview, confirm, verify, undo; originals unchanged), private accounts per user, version history, LLM fallback chain (Groq, Gemini, Claude, Ollama); 42 tests incl. two-user isolation.

OEE Dashboard & Maintenance Copilot Python · pandas · Streamlit · Ollama · RAG

github.com/vikram-ejjagiri-ai/kaizen-oee-maintenance-copilot

- OEE engine per ISO 22400 with data-quality checks (duplicate MES records, wrong bookings), KPIs tested against an independent calculation; 13 weeks of MES data: OEE 76.8 %, biggest losses from speed and changeovers.
- RAG copilot with a local LLM (Qwen 2.5 7B via Ollama): numbers from the OEE engine, hybrid search over manuals and work orders, safety guardrails; 95.9 % pass rate on 49 test questions.

Visual Quality Inspection with Anomaly Detection PyTorch · ONNX Runtime · Streamlit

github.com/vikram-ejjagiri-ai/kaizen-visual-quality-inspection

- PatchCore implemented from scratch in PyTorch, trained only on defect-free images (MVTec AD); image AUROC 1.000 (baseline 0.828), pixel AUROC 0.989.
- Cost-based threshold caught 46 of 47 unseen defects with zero good parts rejected; operator review app with heatmaps, ONNX export (about 120 ms per image on CPU).

Predictive Maintenance: Failure Classification for a CNC Milling Machine scikit-learn · SHAP · Power BI · DAX

github.com/vikram-ejjagiri-ai/kaizen-machine-failure-prediction

- Failure classification on the public AI4I 2020 dataset (not remaining useful life: no timestamps); physics-based features cut the model's error cost by about a third.
- Random forest with 82 % recall at 93 % precision, benchmarked against expert rules; every alarm explained with SHAP; Power BI dashboard with a threshold what-if.

Industry 4.0 Data Platform OPC UA · MQTT · PostgreSQL · Grafana

github.com/vikram-ejjagiri-ai/kaizen-factory-stack

- Simulated bottling line (7 sensors) as OPC UA server, OPC UA → MQTT bridge, PostgreSQL and a live Grafana dashboard.

SKILLS

Programming & data	Python, SQL, pandas, NumPy, Git, Pytest
Machine learning & vision	scikit-learn, PyTorch, SHAP, anomaly detection, ONNX
LLMs & apps	RAG, Text-to-SQL, Ollama (local LLMs), hybrid search, guardrails, LLM evaluation, OCR, FastAPI, Next.js/TypeScript, Streamlit
Industry 4.0	OPC UA, MQTT, PostgreSQL/TimescaleDB, Docker Compose, Grafana, Power BI/DAX, OEE, RFID, MES and maintenance data
Design & automation	SolidWorks, Fusion 360, AutoCAD, MSC Adams, PLC (basic), ROS (basic)
Languages	English (professional) · German (B1, telc certificate 2026) · Telugu (native)

FURTHER INFORMATION

Leadership	President of the Robotics Club, Vasavi College of Engineering (from 12/2023); organised line-follower and maze-solver robot workshops
Award	State rank 43 in the Engineering Common Entrance Test (ECET), 2020
Training	Advanced Robotics – NPTEL (2024) · Design of HVAC Systems in Pharmaceutical Industry – KG MECH (2022) · Industrial training on lathe machines – IRA OM Technologies Pvt. Ltd. (2021)
